Description:				
<ul style="list-style-type: none"> The test was conducted from 10 August 2022 to 29 August 2022 (20 days). The test is conducted at 80%-90% of the rated line pull of the winch. Due to heat build up in the motor, the intensive test time takes longer, and the test is carried out with a 30-minute rest after each. Other than replacing the test wire rope, there are no abnormal phenomena noted during the test. After the test, each component is cleaned and inspected and no abnormal wear and tear found. 				
Conclusion				
During the winch test, there were no irregularities in sound, the braking performance was reliable, all parts were functioning normally, the casting plate was not deformed or broken, and the parts of the reducer were inspected and found intact. Winch test passed.
